SUMMARY

I am a Front End Web Developer with experience in Wordpress, e-commerce, e-learning, and user experience. Comfortable with HTML, CSS, Javascript/jQuery, PHP, Node.js, MySQL, AWS, and Git. Seeking inclusive work environments, willing to re-locate and work remotely.

EMPLOYMENT

Tecture LLC

Front End Developer

Chicago, IL

Oct. 2019 to Current

Working in the Agile development methodology, I create custom websites for a wide variety of clients.

Using HTML, CSS/SCSS, PHP (Wordpress), and Javascript/jQuery I:

- Construct fully customizable, responsive themes. This provides a simple but powerful way for the client to feel in control of their product, and empowers them to self-serve. I achieve this through utilizing, editing, and writing plug-ins.
- Build intuitive, sensible, and beautiful enhancements to these themes. I am the bridge between static wireframes and mockups to a living, interactive product that the client is proud to present to end-users.
- Integrate client's marketing tools (Salesforce, Mailchimp) to seamlessly generate leads.

Using AWS I:

- Initiate and maintain instances. With my mastery of CLI and Bash, I can easily SFTP into the Apache server to troubleshoot, or install SSL certificates.
- Back up and restore client sites using S3

Using Git I:

- Create and maintain code repositories
- Collaborate with fellow front- and back-end developers on features, bugs, and releases using Gitflow

Brella Productions

Jr. Front End Web Developer / Programmer Level 3

Evanston, IL

Dec. 2018 to Oct. 2019

I was responsible for collaborating with senior programmers as well as working independently to create web and mobile technology based applications with estimated budgets and deadlines. I participated in all phases of development with a focus on structure and integration. Some duties included:

- Clarifying what actions the program is intended to perform
- Breaking down program specification into its simplest elements and translating this logic into a programming language
- Devising possible solutions to anticipated problems
- Working as part of a team to write a specific section of a program
- Combining all elements of the program design and testing it
- Testing sample data-sets to check that output from the program works as intended
- Conducting testing and installing the program into production
- Reacting to problems and correcting the program as necessary
- Conducting user acceptance testing to ensure the program can be used easily, quickly, and accurately

McMaster-Carr

Web Publisher and Copywriter

Elmhurst, IL

Feb. 2016 to Mar. 2018

- I designed, built, and maintained content for the McMaster-Carr website using a combination of SAP Master Data Management suite and custom in-house applications.
- I utilized stored product information data in a repository of hundreds of thousands of unique items to generate pages and product groups, including producing and editing product copy
- I evaluated existing content to identify opportunities for improvement and redesign, and presented design plans to groups of three to twelve stakeholders for additional collaboration before developing the content.

SKILLS

WEB DEVELOPMENT: Full Stack Certification, HTML, CSS, Javascript, jQuery, MySQL, React, Node.js, PHP, AWS, Git

EDUCATION

Northwestern University

B.S Psychology 2013

Sept. 2009 to June 2013

Northwestern Coding Bootcamp

Certification Web Development 2018

Aug. 2017 to Feb. 2018
